

Net Item Flag in Item Master

In the Inventory Item Master screen, there is a flag that can be used to control pricing or discounting of items. An item sold at net is not available for price adjustments or additional discounts as controlled by the character set up in the Net item field. A net item can be exempt from Line Item discounts, Bottom Line discounts, and/or percentage adjustments from the Customer Master screen. It can also freeze the price level at which the item is sold. Below is a table describing the available flags.

MM/DD/YYYY	MAIN INVENTORY				ITEM SEQ /
