

Table Options Job Label Prompt for Printer Number

Table Options for Job Label Printer Number

The default Job Label Printer number is specified in TABLE OPTIONS for each Store. To make changes to the Job Label Printer number or to change the option "Prompt for Printer # at POS Print Time," select System Administrator from the Main Menu. Select Options Menu and then Table Options.

Refer to the field Label Printer Number. Enter the default Tag-n-Trak Job Label printer number in this field.

On the same screen, refer to the field Prompt for Printer # at POS Print Time: (Y, N or C=clear entry).

If more than one Job Label printer is used at a store location, the Job Label print program in Point of Sale has a feature that provides the option to "prompt" for a printer number when using F12 and 'J' to print job labels from the Closing Order screen. Here is how it works.

Prompt for Printer # at POS Print Time: _ (Y, N or C=clear entry)

N – Means No, do not prompt for a job label printer #. 'N' is the default for this field. There will be no prompt for the user to enter a printer # when selecting to print job labels using F12 and 'J'ob label or F12 and 'S'elective job on the Point of Sale order closing screen.

Y – Means Yes, prompt for a job label printer #. Change the field to Y if you want the program to display a pop-up box and prompt for a printer number when printing job labels from the POS closing screen. The pop-up box will default the printer number to the Job Label printer defined in Table Options. The salesperson simply needs to press enter to accept the default printer. If a different printer is desired, the salesperson needs to type the desired printer number and press the ENTER key. EXAMPLE: Assume your Job Label printer is set up in Table Options as printer 4. When pressing F12 and 'J'ob label or F12 and 'S'elective job, the screen will display:

+-----+
| Enter Printer for Job Label Print 4 |
+-----+

C – Means yes you want the program to display a pop-up box and prompt for a job label printer but "CLEAR" the entry so that it does not default to the job label printer defined in Table Options. You'll get the same pop-up box prompt, but the printer # will be blank and require that the salesperson type in a valid printer number. EXAMPLE: Assume your Job Label printer is set up in Table Options as printer 4. When pressing F12 and 'J'ob label or F12 and 'S'elective job, the screen will display:

+-----+
| Enter Printer for Job Label Print _ |
+-----+

The printer entered must be a valid printer in the Printer Options file. If the user types an invalid printer number, the program will display: CAN NOT ACCESS PRINTER

NOTE: The "Prompt for Printer # at POS Print Time" does NOT affect printing job labels for a purchase order. If you print job labels for a purchase order, the labels will print on the job label printer defined in Table Options.
